1. **Watershed Assessment** – A watershed assessment is a study of the physical, biological, and cultural resources of a watershed. It is a process that involves the collection and analysis of data on the watershed's land use, water resources, and natural resources. The assessment is used to identify the watershed's strengths and weaknesses, and to develop a plan for the watershed's future.
2. **Watershed Assessment Report** – A watershed assessment report is a document that provides information about the watershed's resources and the results of the assessment. It typically includes a description of the watershed, a list of the resources, and a summary of the findings of the assessment.
3. **Watershed Assessment Committee** – A watershed assessment committee is a group of people who are responsible for the assessment. They typically include representatives from the local government, the private sector, and the community.
4. **Watershed Assessment Process** – The watershed assessment process is a series of steps that are used to conduct the assessment. It typically includes the following steps: 1. **Identify the watershed** – Determine the boundaries of the watershed. 2. **Collect data** – Gather information about the watershed's resources. 3. **Analyze data** – Examine the data to identify the watershed's strengths and weaknesses. 4. **Develop a plan** – Create a plan for the watershed's future.
5. **Watershed Assessment Plan** – A watershed assessment plan is a document that outlines the steps that will be taken to conduct the assessment. It typically includes a description of the watershed, a list of the resources, and a summary of the findings of the assessment.
6. **Watershed Assessment Results** – The watershed assessment results are the findings of the assessment. They typically include a description of the watershed, a list of the resources, and a summary of the findings of the assessment.
7. **Watershed Assessment Report** – A watershed assessment report is a document that provides information about the watershed's resources and the results of the assessment. It typically includes a description of the watershed, a list of the resources, and a summary of the findings of the assessment.
8. **Watershed Assessment Committee** – A watershed assessment committee is a group of people who are responsible for the assessment. They typically include representatives from the local government, the private sector, and the community.
9. **Watershed Assessment Process** – The watershed assessment process is a series of steps that are used to conduct the assessment. It typically includes the following steps: 1. **Identify the watershed** – Determine the boundaries of the watershed. 2. **Collect data** – Gather information about the watershed's resources. 3. **Analyze data** – Examine the data to identify the watershed's strengths and weaknesses. 4. **Develop a plan** – Create a plan for the watershed's future.
10. **Watershed Assessment Plan** – A watershed assessment plan is a document that outlines the steps that will be taken to conduct the assessment. It typically includes a description of the watershed, a list of the resources, and a summary of the findings of the assessment.

2. *Blackburnian* (Blackburnian): *Blackburnian* (Blackburnian) is a term used to describe the community of plants and animals that are found in the Black Hills region of South Dakota. It is named after the naturalist and explorer William D. Blackburn, who first described the community in 1891. The community is characterized by a high degree of endemism, with many species found nowhere else in the world. The community is also characterized by a high degree of biodiversity, with a large number of different species of plants and animals. The community is found in a variety of habitats, including forests, grasslands, and mountains. The community is currently threatened by habitat loss and fragmentation, and is listed as a threatened community by the U.S. Fish and Wildlife Service.
